

AuthDocChain

Official Platform Documentation

Version 1.0 — March 2025

*This document explains how the AuthDocChain platform works,
your privacy rights, and our compliance with GDPR.*

1. PLATFORM OVERVIEW

What is AuthDocChain?

AuthDocChain is a SaaS (Software as a Service) platform dedicated to the authentication and secure management of institutional documents. It enables organizations, companies, universities, and institutions to store, certify, and verify digital documents with industrial-grade security.

Core Features

- Secure deposit and storage of digital documents
- Cryptographic certification of document authenticity
- Role-based access control and permission management
- Full traceability through a complete audit log
- Multi-factor authentication (MFA) for every account
- Open API for integration with third-party systems

Who is AuthDocChain for?

- Academic institutions and universities
- Government institutions
- Law firms and notary offices
- Companies with document compliance obligations
- Non-governmental organizations (NGOs)
- Any professional requiring document certification

2. TECHNICAL SECURITY

How is your data protected?

AuthDocChain applies the highest industry security standards. Here is a detailed overview of the technical measures in place:

Data Encryption

- All data in transit is encrypted with TLS 1.3 (HTTPS protocol)
- Passwords are hashed using bcrypt (cost factor 12) — they are never stored in plain text
- API keys are stored as HMAC-SHA256 hashes — the raw key is only displayed once upon creation

- MFA security codes and password reset codes are bcrypt-hashed before storage

Authentication & Access Control

- Multi-factor authentication (MFA) required at every login
- JWT (JSON Web Tokens) with automatic rotation on every refresh
- Revoked token blacklist persisted in database
- Automatic account lockout after 5 failed login attempts
- Anti-bot protection via Cloudflare Turnstile on all authentication forms

Infrastructure

- Hosted on secure cloud infrastructure with Web Application Firewall (WAF)
- PostgreSQL database with automatic encrypted backups
- Complete and immutable audit log of all user actions
- Automatic cleanup of expired tokens every hour

SECURITY SUMMARY

No password, API key, or security code is ever stored in plain text in our databases. All sensitive data is irreversibly hashed or encrypted.

3. PRIVACY & GDPR COMPLIANCE

General Data Protection Regulation Compliance

AuthDocChain is fully aware of its obligations under the GDPR (EU Regulation 2016/679) and is committed to respecting the rights of every user, particularly users residing in the European Union.

What data do we collect?

Data Collected	Purpose
Email address	Account identification, security notification delivery
Name / company name	Institution identification on the network
Phone number	Identity verification and account recovery
Country of residence	Regulatory compliance and applicable jurisdiction

Connection logs	Security, fraud detection, audit
Uploaded documents	Storage and certification as requested by the user

Data we do NOT collect

- We do not collect browsing data or behavioral tracking
- We do not sell your data to third parties
- We do not share your data with advertisers
- We do not perform automated profiling for commercial purposes

Your GDPR Rights

As a user, you have the following rights which you may exercise at any time by contacting privacy@authdocchain.com:

- Right of access: obtain a copy of all your personal data
- Right to rectification: correct any inaccurate information
- Right to erasure ('right to be forgotten'): request deletion of your account and all your data
- Right to data portability: receive your data in a structured, machine-readable format
- Right to object: object to the processing of your data in certain cases
- Right to restriction of processing: request temporary suspension of processing

PROCESSING DEADLINE

AuthDocChain commits to responding to any request regarding your rights within a maximum of 30 calendar days, in accordance with Article 12 of the GDPR.

Legal Basis for Processing

The processing of your personal data is based on the following legal grounds:

- Performance of contract: processing necessary to provide the service you subscribed to
- Legitimate interest: platform security, fraud detection, audit logs
- Explicit consent: collected during registration via acceptance of Terms of Service

Data Transfers Outside the EU

AuthDocChain commits to not transferring your personal data outside the European Economic Area (EEA) without appropriate safeguards. Where a third-party technical provider is based outside the EEA, we ensure that Standard Contractual Clauses (SCCs) approved by the European Commission are in place.

Data Retention Periods

- Active account data: retained for the duration of the contractual relationship
- Security logs: retained for a maximum of 12 months
- Data after account closure: deleted within 30 days, unless a legal obligation requires otherwise

4. COOKIES & TRACKERS

Our Cookie Policy

AuthDocChain uses a minimal number of cookies, all strictly necessary for the operation of the service. We do not use advertising cookies or third-party trackers for marketing purposes.

Cookie Type	Description
Session cookie	Maintaining your secure login session
CSRF security cookie	Protection against CSRF attacks
Cloudflare Turnstile	Anti-bot protection (no personal data collected)

4. WHAT WE DO NOT STORE

Your documents stay with you

This is the most important point in this document, and we want to be absolutely clear about it.

CORE PRINCIPLE

AuthDocChain NEVER stores the content of your documents in its databases. We do not see your documents. We cannot read them. We have no access to them.

How does certification work without storage?

When you submit a document for certification, AuthDocChain generates a unique digital fingerprint of that document (called a cryptographic hash). It is this fingerprint — and only this fingerprint — that is recorded in our system.

A cryptographic hash is a unique string of characters that represents your document. It is mathematically impossible to reconstruct the original document from its hash. Your document never leaves your possession.

What exactly is stored?

What IS stored	What is NOT stored
Document fingerprint (hash)	Document content
Date and time of certification	Pages, images or text from the document
Certifying institution identifier	A readable copy of the document
Certificate validity status	Any information extracted from the document

Why this approach?

This was a deliberate choice, precisely because we know that the confidentiality of your documents is non-negotiable. A contract, a diploma, a medical file or a notarial deed should never transit through or be stored on third-party servers without absolute necessity. AuthDocChain certifies without seeing.

5. CONTACT & SUPPORT

A question? We are here.

AuthDocChain is a platform built for professionals with high standards for security and confidentiality. If anything in this document is unclear, or if you have any questions before starting to use the platform, please contact us directly. We respond personally.

General inquiries	contact@authdocchain.com
Privacy & Data	privacy@authdocchain.com
Technical support	support@authdocchain.com
Legal questions	legal@authdocchain.com

OUR COMMITMENT

We respond to all privacy-related questions within 48 business hours. Your trust is the foundation of everything we build.
